CANFAR IS A NATIONAL, INDEPENDENT ORGANIZATION ADVANCING HIV KNOWLEDGE AND SCIENCE. FUELED BY FUNDRAISING, WE INVEST IN AND FOSTER EFFECTIVE RESEARCH, BUILD AWARENESS, AND CULTIVATE PARTNERSHIPS TO SHARE EXPERTISE AND ENCOURAGE JOINT ACTION. WE HAVE GIVEN MORE THAN \$26 MILLION IN GRANTS TO HIV/AIDS RESEARCH PROJECTS. TOGETHER, THESE NEARLY 575 PROJECTS HAVE HELPED ACHIEVE BREAKTHROUGHS IN HIV PREVENTION, TESTING, ACCESS TO TREATMENT, COMBATTING STIGMA, AND THE SEARCH FOR A CURE.

LETTER FROM THE CHAIR

**ANDY
PRINGLE**
CHAIR OF THE BOARD

To the CANFAR community,

Canada saw a 35.2% increase of new HIV diagnoses in 2023 over 2022. This on the heels of the 24.9% increase in 2022 over 2021. Why, after over four decades fighting this epidemic, are we seeing numbers trend in the wrong direction?

The HIV epidemic in Canada has been fueled in large part by health inequalities, the reduction of testing services during the COVID-19 pandemic, a lack of comprehensive youth sexual health education, the toxic drug crisis, and a lack of culturally-appropriate testing and care. Add to this, about 15 percent of people living with HIV in Canada haven't been

connected to antiretroviral therapy — that's almost 16,000 people who aren't receiving life-saving treatment.

Bold Actions to Fuel Better Access

Access to testing and treatment has long been an issue in dealing with public health threats. When it comes to HIV, we see higher rates of new cases among equity-seeking communities like African, Caribbean and Black, and Indigenous people, racialized women, and people who inject drugs.

We can only end HIV if we put people first. Especially the communities that have historically been put last. Because the most socially marginalized people are often the ones disproportionately impacted by public health threats like HIV.

This is summed up perfectly by the International AIDS Society when they state, "Rather than thinking of 'hard-to-reach populations', we should think of 'hard-to-reach health services'."

That's why CANFAR this year launched Bold Actions, our latest mission statement developed in concert with almost two dozen experts from institutions like the National Sexually Transmitted and Blood-Borne Infections Laboratory (Public Health Agency of Canada), the National HIV and Retrovirology Laboratories (Public Health Agency of Canada), CATIE – Canada's source for HIV and Hepatitis C Information, the Dr. Peter Centre, HQ Toronto, Communities, Alliances & Networks (CAAN), Freddie, and COCQ-SIDA.

LETTER FROM THE CHAIR

Our new strategic plan commits to three priorities:

- Increase national awareness among key populations, through strategic campaigns in collaboration with community-based organizations from coast-to-coast;
- Increase access to HIV testing and care, by funding new ways to use technology and community-based models to meet people where they are and in ways they can feel safe to get tested and connected to care and treatment.
- Fund implementation research, focused on addressing health and wellbeing issues faced by Indigenous peoples, African, Caribbean and Black people, racialized women, and people who use substances and inject drugs, in addition to continued investment in scientific research.

Our Bold Actions are already on full display. Over 163,000 HIV & STBBI tests were conducted at the CANFAR Express Testing Laboratory at HQ Toronto in the last year. Sexfluent helped distribute over 1,100 HIV self-test kits directly in our communities. We're working with CATIE on knowledge mobilization projects alongside leaders from African, Caribbean, and Black and Indigenous communities. We brought together over 80 community partners for our 2023 World AIDS Day campaign. We invested \$340,000 into research grants and the CANFAR-CTN+ Postdoctoral Fellowship Award. And we're developing a Strategic Implementation Advisory Committee to help direct CANFAR's upcoming \$1.5 million funding for strategic investments.

CANFAR will fund several implementation projects in the coming years that will focus on breaking down barriers to testing and bringing HIV testing to more communities through mobile and self-testing initiatives across Canada. These projects are expensive but are mission critical for us to finally end the epidemic in this generation.

Catalyzing action in underserved communities, increasing access to HIV testing and linkage to treatment, and funding implementation projects are keys to achieving our goal.

As we reflect on our last fiscal year, we are emboldened by our strong financial position because of you: our funders and supporters. We can already start investing in new projects because you have seen our successes and have continued to raise vital funds for our organization to direct into Canada's response to HIV/AIDS.

I strongly believe that it is possible to end the HIV epidemic in Canada by the end of 2030. We can get there with rapid, strategic, and coordinated activity. Or, simply put, Bold Actions.

BOLD ACTIONS STRATEGIC PLAN

CANFAR'S BOLD ACTIONS & STRATEGIC TASK FORCE

Starting in January 2023 and continuing through October 2023, CANFAR convened a strategic task force to chart our renewed course and vision for our mission to end HIV in Canada. The outcome is a three-pronged blueprint that focuses on key outcomes including greatly improving access to HIV testing for under-resourced groups, moving toward an implementation research framework with upcoming investments, and amplifying our impact on national awareness through special knowledge mobilization programming in coordination with CATIE, Canada's source for HIV and Hep C news.

STRATEGIC TASK FORCE

Developed in collaboration with a task force that included guidance from the National HIV and Retrovirology Laboratories, the Canadian AIDS Treatment Information Exchange (CATIE), the Dr. Peter Centre, HQ Toronto, Communities, Alliances & Networks, and Freddie, CANFAR's new strategic plan highlights the importance of swift and urgent attention to Canada's growing HIV epidemic. As long-time CANFAR advisor, Dr. Sean B. Rourke, says, "We have the tools and we know what we need to do to end the HIV epidemic, but as a country we need to focus on scaling and implementation. CANFAR's new strategic plan considers the last four decades of research and discoveries, and lays out a thoughtful and outcome-driven blueprint to ensure that no one is left behind. It will ensure that anyone living with or at risk of HIV can be healthy and thrive."

CANFAR'S BOLD ACTIONS

**PRIORITY 1: INCREASE NATIONAL
AWARENESS AMONG KEY POPULATIONS
THROUGH STRATEGIC CAMPAIGNS IN
COLLABORATION WITH COMMUNITY-
BASED ORGANIZATIONS FROM COAST-
TO-COAST**

**PRIORITY 2: INCREASE ACCESS TO HIV
TESTING AND CARE, BY FUNDING NEW
WAYS TO USE TECHNOLOGY AND
COMMUNITY-BASED MODELS TO MEET
PEOPLE WHERE THEY ARE AND IN
WAYS THEY CAN FEEL SAFE TO GET
TESTED AND CONNECTED TO CARE AND
TREATMENT**

**PRIORITY 3: FUND IMPLEMENTATION
RESEARCH, FOCUSED ON ADDRESSING
HEALTH AND WELLBEING ISSUES FACED
BY INDIGENOUS PEOPLES, AFRICAN,
CARIBBEAN AND BLACK PEOPLE,
RACIALIZED WOMEN, AND PEOPLE WHO
USE SUBSTANCES AND INJECT DRUGS,
IN ADDITION TO CONTINUED
INVESTMENT IN SCIENTIFIC RESEARCH.**

BEING BOLD AND ACTING WITH URGENCY AS A LEADER & A CATALYST WILL BE THE ONLY WAY TO ACHIEVE OUR GOALS OF REACHING THE 95-95-95 TARGETS SET OUT BY UNAIDS WHERE NEW CASES OF HIV ARE RARE, AND WHERE ALL PEOPLE LIVING WITH HIV KNOW THEIR STATUS, HAVE ACCESS TO TREATMENT TO ACHIEVE VIRAL SUPPRESSION, AND ARE ENGAGED IN THE CARE THAT MEETS THEIR HEALTH AND SOCIAL NEEDS SO THEY CAN THRIVE. WE WILL BE UNWAVERING IN OUR COMMITMENT TO GET THERE.

RESEARCH CYCLE 31

RESEARCH CYCLE 31 GRANT RECIPIENTS

In FY24, CANFAR funded a new research cycle amounting to an over \$290,000 investment in Canadian research dedicated to finding new pathways to prevention, testing, treatment and ultimately a cure for HIV/AIDS. These 7 projects represent some of the top investigators actively seeking to end the HIV epidemic in this generation.

RECIPIENT (\$40,000)
DR. MARK HULL

PROJECT
**SETTING THE STAGE FOR NOVEL PRE-EXPOSURE
PROPHYLAXIS THERAPIES IN PERSONS WHO USE DRUGS
IN VANCOUVER**

IN BRIEF

Persons who use drugs remain at risk for HIV but remain underserved by HIV prevention technologies. As a key population in the HIV epidemic, it is imperative that we address the barriers that prevent this population from receiving the care they need. Dr. Hull's research addresses the low PrEP knowledge/awareness and other barriers to PrEP uptake for people who use drugs and live with HIV in Vancouver. By understanding these barriers and facilitators of PrEP uptake within existing care structures, both from a community standpoint and from the perspective, opportunities to plan for innovative models of PrEP delivery can be enacted for this priority population.

RESEARCH CYCLE 31 GRANT RECIPIENTS

RECIPIENT (\$40,000)

DR. PETRONELA ANCUTA

PROJECT

EXPLORING HIV-ASSOCIATED IMMUNOLOGICAL ALTERATIONS AT THE MATERNAL-FETAL INTERFACE IN THE ERA OF ANTIRETROVIRAL THERAPY (ART)

IN BRIEF

Dr. Ancuta's research investigates immune system deficiencies in placental macrophages to understand how HIV operates in women receiving antiretroviral therapy (ART) as compared to women who are HIV-negative. Dr. Ancuta's discoveries can fill crucial gaps in HIV research about the degree to which HIV infects cells in the placenta and whether this correlates with the prevalence of unfavorable pregnancy outcomes in HIV patients.

CO-INVESTIGATORS

Dr. Isabelle Boucoiran

Ste Justine Hospital, Montréal

Dr. Cécilia Costiniuk

McGill University Health Center, Montréal

Mr. Ramon Edwin Caballero, PhD Student

McGill University, CHUM Research Centre

Mrs. Shari Margoless

Community Knowledge user

RESEARCH CYCLE 31 GRANT RECIPIENTS

RECIPIENT (\$40,000)
DR. JEAN-PIERRE ROUTY

PROJECT
**TARGETING ACBP AS AN IMMUNE
CHECKPOINT FOR HIV CURE AGENDA**

IN BRIEF

Multiple studies on HIV have shown the differences in how the virus affects immune control between controllers and progressors of HIV. Others have shown the differences in how the virus affects metabolic control between the same two groups. However, limited research is available to see if there is a link between the differences we see. Dr. Jean-Pierre Routy's research aims to find this connection and use it to define key characteristics associated with progressive HIV. By defining important traits that link the metabolic and immune system effects of HIV on a person, his work can pave the way for new innovative drug interventions.

RESEARCH CYCLE 31 GRANT RECIPIENTS

RECIPIENT (\$40,000)

DR. CECILIA T. COSTINIUK

PROJECT

**INTERPLAY BETWEEN INTRA-PULMONARY NATURAL
KILLER CELL PROFILE AND HIV RESERVOIRS IN
PEOPLE LIVING WITH HIV**

IN BRIEF

NK cells play a critical role in regulating chronic infection and inflammation, and mounting evidence suggests they play important roles in chronic infections such as tuberculosis, and inflammatory disorders like asthma. Despite numerous investigations on peripheral blood NK cells in HIV-infected individuals, virtually little is known as to how the infection affects NK cell compartment in lungs. Dr. Costiniuk is working to determine whether there is a correlation between NK cell profile (phenotype and function) and HIV reservoir size. Through the discoveries made in this investigation, we can find ways to relieve people living with HIV of some of the burdens of respiratory viruses and lung infection, considering now that due to therapies like ART, lifespans of PLWH now approach those of people without HIV infection and there has been a shift in the spectrum of lung infections and conditions afflicting PLWH.

RESEARCH CYCLE 31 GRANT RECIPIENTS

RECIPIENT (\$40,000)

DR. NATHAN LACHOWSKY

PROJECT

**PREFERENCES FOR LONG-ACTING INJECTABLE AND
OTHER NOVEL DELIVERY ROUTES FOR HIV TREATMENT
AMONG PEOPLE LIVING WITH HIV IN BRITISH COLUMBIA**

IN BRIEF

Long-acting HIV medications have the potential to significantly improve HIV care, but little research has been performed to identify community preferences and priorities for their implementation. Dr. Lachowsky's qualitative, community-based research will uncover the important preferences and barriers for delivering long-acting HIV medications to populations that would most benefit from its introduction. Understanding the preferences of various communities that are disproportionately affected by new HIV infections would help to enhance understanding, access, and acceptability of long-acting HIV medicines.

RESEARCH CYCLE 31 GRANT RECIPIENTS

RECIPIENT (\$40,000)
DR. MARK WATSON

PROJECT
ADAPTING AND OPERATIONALIZING THE WOMEN-CENTERED HIV CARE MODEL FOR INDIGENOUS WOMEN LIVING WITH HIV IN CANADA

IN BRIEF

Research shows that Indigenous women are diagnosed with HIV at higher rates than the general population of Canadian women, yet HIV health-service delivery models do not consider Indigenous spirituality or epistemologies. Carrie Martin, a PhD student in Dr. Watson's lab, explores the healthcare experiences experienced by Indigenous women living with HIV to inform the development of care models that responds to their unique needs. Martin's work seeks to ensure that the HIV care cascade along with HIV biomedical approaches include holistic Indigenous models of wellness. By doing so, we can improve the quality of life and health outcomes for Indigenous women living with HIV.

The WCHC model is in the shape of a "house" to represent safety and stability—essential aspects for care delivery. Trauma- and violence- aware care is the "foundation" to acknowledge the alarmingly high rates of violence, trauma and intersecting oppressions women living with HIV face.

RESEARCH CYCLE 31 GRANT RECIPIENTS

RECIPIENT (\$50,000 – C. BUNTING MEMORIAL GRANT)
PATRICK O'BYRNE

PROJECT
**PROMOTING PREP UPTAKE
FOR MEN IN TORONTO**

IN BRIEF

PrEP has mostly been implemented passively in Canada, with individuals first learning about it and then seeking a healthcare center where it is available. Dr. Patrick Obyrne aims to improve that system by meeting people where they are. His research intends to identify those who face the highest risk and disadvantage in order to determine whether active PrEP offers will enhance adoption among members of equity-seeking groups. He expects that this will result in the best possible care and prevention outcomes for HIV-positive populations.

SPECIAL RESEARCH PROJECTS

2024 CAHR-CANFAR AWARDS

The CAHR-CANFAR Excellence in Research Awards highlight and celebrate the contributions of Canadian researchers in HIV/AIDS research. Given out since 2017, the awards are announced annually at the CAHR Conference.

CANFAR-CTN POSTDOC FELLOWSHIP

The CTN Postdoctoral Fellowship Awards Program was established with a clear mission: to empower early-career researchers, providing them with invaluable opportunities to expand their knowledge, and craft their own research programs and trials. Our joint award has brought forth a new generation of investigators with half-fellowships granted since 1997, and full fellowships since 2011. The 17 researchers who have benefitted from this support have conducted innovative research initiatives that have yielded breakthroughs in HIV research, shaping the landscape of knowledge in our field.

2021-2023 CANFAR-CTN FELLOW

DR. CARA SPENCE (\$50,000 ANNUALLY)

PROJECT

**CHAMPIONING EQUITY IN HEALTH CARE
FOR INDIGENOUS WOMEN LIVING WITH HIV**

IN BRIEF

Dr. Cara Spence brings extensive experience working with Indigenous communities in Saskatchewan, spanning nearly 25 years. With a deep understanding of the complexities of Indigenous health, Dr. Spence brings into focus 'the work of truth and reconciliation' with Indigenous communities by highlighting the impact of HIV infection among Indigenous women. Collaborating closely with Indigenous women living with HIV or HCV, Dr. Spence seeks to establish a comprehensive clinical dataset to study care for this population, identify vulnerabilities, and advocate for tailored interventions.

CANFAR RAPID TESTING LAB AT HQ TORONTO

In 2022, CANFAR funded the Express Testing Laboratory at HQ Toronto with a grant to operationalize this vital rapid testing site for three years. It has been a resounding success.

RECIPIENT
HQ TORONTO (\$500,000)

PROJECT
**EXPRESS TESTING LABORATORY
FOR HIV & STBBIS**

IN BRIEF

Our two instruments are the Abbott Alinity and the Hologic Panther. On the Abbott Alinity we perform the screening Serologic tests (look for antibodies for Syphilis and HIV-1 & HIV-2, each test takes serum (separated from blood) and takes about 30 minutes to an hour.

On the Hologic Panther we perform Nucleic Amplification (similar to PCR) for Gonorrhea and Chlamydia from rectal, pharyngeal swabs, and urine, the test takes about 4 hours. The Hologic Panther also performs confirmatory Nucleic Amplification Test (similar to PCR) for HIV-1 from serum (separated from blood) and takes about 3 hours.

These result times are a lot faster than sending specimens to PHO (Public Health Ontario) as they can take days or weeks. HQ has capacity to provide testing results within same or next day.

CANFAR funded the procurement of the Abbott Alinity and the Hologic Panther and operations for three years starting in 2022. The lab conducts over 150,000 HIV & STBBI tests annually.

NATIONAL YOUTH AWARENESS

NATIONAL YOUTH AWARENESS: SEXFLUENT

Sexfluent is dedicated to ending Canada's HIV epidemic by equipping youth ages 15-25 with the knowledge and tools necessary to prevent HIV.

PROJECT
SEXFLUENT.CA

FUNDING
\$480,000 ANNUAL BUDGET

IN BRIEF

This past year, Sexfluent reached over 1.5 million impressions, with 39K visitors on our website and a combined audience on social media (Instagram and TikTok) of 14,825. 8,865 at-risk youth through 26 community events across 14 cities, 4 provinces, and 1 territory, distributing 5,895 condoms and 571 HIV self-test kits.

FY24 RESULTS AT A GLANCE

- Secured \$300,000 over 3 years from the TD Ready Commitment to fund the Sexfluent program (2024-2026)
- Renewed \$300,000 over 3 years from the P. Austin Family Foundation (2025-2027)
- Directly reached more than 5,000 at-risk youth through in-community educational outreach.
- Distributed 650 HIV self-test kits to youth in priority communities.
- Increased digital media footprint by an average of 41% per quarter across both Instagram and TikTok.

Part of our annual Love In, Stigma Out campaign, #LIVINGART references antiretroviral therapy, aka ART, which lets people living with HIV take full advantage of all life has to offer—without any fear of passing on the virus.

CAMPAIGNS FREDDIE PRIDE 2024

Go Freddie's Pride 2024 campaign, Protect Our Pride, licenses the artwork of Keith Haring and benefitted CANFAR with a \$25,000 donation. It also found its way to AIDSBEAT27 with a special after party featuring Freddie's DJ.

CAMPAIGNS LCBO PRIDE 2024

CANFAR is tremendously grateful for the kind support of LCBO in pledging \$360,000 as part of their social impact platform, Spirit of Sustainability, to help close gaps in HIV awareness and access to care in Ontario. “LOVE PAIRS WITH EVERYTHING” is LCBO’s annual Pride campaign, which this year raised \$1.6 million in support of the health and wellbeing of the 2SLGBTQI+ community.

FUNDING NEWS

CAMPAIGNS AMBASSADOR PROGRAM

CANFAR's National Ambassador Program engages diverse people from various backgrounds to spread awareness across the country about HIV stigma, and is vital to engaging Canadians through stories of people living with and impacted by HIV.
